

Filament friendly.

Temco Twist Stoppers DST

Based on the experience as the technology leader in texturing, Saurer has created its advanced metal Temco Twist Stoppers DST. The double bearing offers several advantages compared to single bearing versions such as stable running behaviour and longest bearing life.

Range of application

The range of application covers all yarn counts and profiles for any type of textured yarn.

Features and benefits

→ **Hard chrome coated surface**

Filament friendly but wear resistant orange peel surface for gentle yarn treatment

→ **High precision double ball bearings**

For stable running at unsurpassed lifetime

→ **Full metal body**

For longer service life, reduced wear and stable operating conditions

→ **Highest process stability**

Due to stable yarn flow and secure, but smooth twist stop

→ **Low friction**

No additional tension for constant yarn quality

→ **Low inertia**

Reduces tension peaks during startup

→ **Suitable as original equipment or retrofit**

For all existing types of texturing machines

Design variants

One Thread (S – single yarn)
